

ABSTRACT

An inkjet printer includes a pagewidth printhead assembly that defines a plurality of ink
5 passages so that the printhead assembly can be supplied with ink. An ink conduit structure
is connected to the printhead assembly, the ink conduit structure defines a plurality of
converging ink conduits that are in fluid communication with respective ink passages. An
ink distribution structure is connected to the ink conduit structure, the ink distribution
10 structure defining a plurality of ink ducts, each ink duct being in fluid communication with
a respective set of ink conduits. A number of inlet ports are arranged on the ink distribution
structure, each inlet port being in fluid communication with a respective ink duct.
